Boosters

A second vaccination is required after the initial or the 1st rabies vaccine- 1 year, then boosters every 3 years.

Puppies need a booster 1 year after completing their initial series, then all dogs need a booster every 3 years or more often.

Puppies need a booster 1 year after completing the initial series, then all dogs need a booster every 3 years or more often.

Puppies need a booster 1 year after completing the initial series, then all dogs need a booster every 3 years or more often.

A booster may be necessary after 1 year, depending on manufacturer recommendations; revaccination every 3 years is considered protective.

Annual or 6-month boosters may be recommended for dogs in high-risk environments.

May be needed annually, prior to the start of tick season or if pet will travel to the East coast or tick area

Once yearly for dogs in high-risk areas, or every 3 years for low risk

Yearly

Yearly update in early spring
